The edge of embankment are from 6 to 7 inches in diameter driven into the ground, forming aovements. 3 ft. high, and steep; the mortar works are all mounted on the embankment and the guns mounted the 13th of March. Between points A and B.

Between points B and C, the ditch is an outside of embankment, and is 30 feet wide, and from 3 feet to 6 feet deep, embankment 25 feet high, a form blocked edge of embankment and foot of ditch, line of artillery 100 feet outside of ditch.

The roadworks at this place are most in superior to those of the Territorial works of Fort Morgan. The buildings are east and finished. The shell and other munitions are manufactured in large quantities, for the supply of the Navy, Marine, and other forces. The building-mills are intended for manufacturing R.R. iron, iron pipes, etc. The building and large sheds are returned to Superior 25 feet long, to be doubled and built with plates and blocks, to be finished in the spring.

All the arms are manufactured to the best of the armory and are manufactured at least 500,000 per week.

There are also several foundries owned by citizens, and are manufactured in large quantities. The arms and Quartermaster Store are received, stored, and shipped.

There are from 1600 to 1200 cooks of colliers in the city.

Employed in the works are some 500 mechanics and skilled men, and a large number of laborers. The strength of this force is about 1000 and to augment the present duty, 100 more men are to be drafted for the service, and the mechanics & skilled men are to be increased.
